RE: Oakstead site visit

3/4/21

Dan,

On Monday March 1, 2021 Matt and I visited Oakstead to asses if an updated trees survey is needed. While we are available to perform an updated tree survey we do not think it is necessary. As expected some of the trees look better while there was some normal forest storm damage and decline. In a few of the declining areas, strangling vines (virginia creeper) and scrub brush have unfortunately aided in decline of some larger trees. We feel that there would not be any new relevant data that could benefit from performing an updated tree survey at this time.

On a different note, there are a significant amount and variety of trees that can be saved by relocating them. Most of these trees are in the 4"-9" diameter range. Properly relocated and taken care of these trees could add a tremendous value to your project. The transplantable trees could be incorporated into part of your final landscape plan.

Please feel free to Contact us at anytime if you have any questions.

Thanks again,
